NEO-Nitinol™ - Thermal Arches

NEO-Nitinol PLUSTM is a super elastic material which utilizes the shape memory effect characteristics of Nitinol to deliver the following clinical features.

Easy insertion. NEO-Nitinol PLUSTM is soft and pliable at room temperature to allow severe malposed teeth to be fitted

Patient Comfort. Shape Memory effect transformation occurs just above body temperature stiffening wire to produce a light controlled force ideal for early treatment.

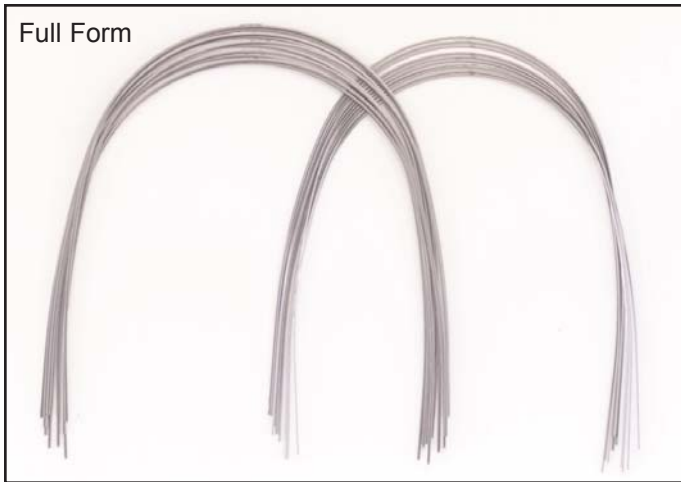

Reformable. Sharp bends produce a permanent set without loss due to creep after formation.

SuperElastic Niti Archwires specifically created for the Ormco/A Co Damon System 2 Bracket

**NEO-Nitinol™ - Thermal
Reverse Curve & RC - 5 Arches**

Reverse Curve

Our "RCS" (reverse curve of spee) archwires combine the advantages of our SE Two strength with the added benefits of a reverse curve. Quality manufacturing and inspection methods ensures you will receive a consistent arch shape every time! All of our "RCS" arch wires are carefully finished to ensure that the wire slides easily through the bracket slot and applies continuous force for ideal biological tooth movement. This is a must in all class II corrections involving deep bite and open bite cases. Use "RCS" archwires in conjunction with springs or elastomerics for retraction, or turn the "RCS" inside out for arch expansion. We have two shapes available. The original Reverse Curve and RC-5 considered the straight leg version on Reverse Curve.

Special Clinical Benefits:

Prevents unwanted tooth movement while preserving the arch form.
 Mesio-lingual molar rotation is prevented with special posterior curved arch wire ends.
 Teeth located next to extraction areas will not tip or lose incisor torque.
 Helps to open the patient's bite and prevents "Excess Curve of Spee."

- Bite opening and closing
- Initial leveling and aligning
- Arch consolidation and expansion
- Retraction of flared, protruding incisors
- Deep Bite Correction
- Open Bite Correction

RC is the original and most popular Reverse Curve with moderate curve, torque and distal toe-in.

RC-5 is the arch of choice for tilting back the molars for anchorage purposes. It maintains uprighted molars while using auxiliary arches or nitinol retraction springs for the cuspids and is excellent for lower anterior teeth intrusion and leveling the occlusal plane. RC-5 is considered the straight leg version on Reverse Curve. It is identical to the Full Form shape archwires with moderate curve and no distal toe-in or posterior torque.

**Pyramid Nitinol™ - SE
Arches**

Pyramid Nitinol™ is a super elastic material formed in a proprietary process to deliver the following clinical features:

- Maximum stiffness to deliver high force at controlled super elastic rate
 - Fracture resistant. You may reform this wire without fear of breakage. When reforming nitinol plus slight overbending is recommended to ensure result.
 - Creep resistant. Austenitic crystalline structure ensures nitinol plus will not creep back to its original shape after being reformed.
 - High resiliency enables Nitinol Plus™ to be flexed 180 degrees and still returns to original shape.
- Nitinol Plus is available in a narrow arch form upon special request.

**Pyramid Nitinol™ - SE
Coated - Tooth Colored
Arches**

Creating Beautiful Smiles does not require non-aesthetic treatment. Tooth-colored and gold-plated archwires complement visual values important to many orthodontic patients. The aesthetic coatings of our NiTi and Stainless Steel archwires do not degrade the inherent performance characteristics of the underlying base wire.

All tooth-colored archwires necessitate the use of base wires that are .002" smaller than the final coated dimensions, so please consider this when selecting wires to ensure performance will be compatible with treatment objectives. Gold coated wires require minimal plating and are not dimensionally affected.

Tooth-colored archwires are ink midlined for symmetrical identification. After archwire placement, rub midline gently with a cotton swab dipped in isopropyl alcohol-this will remove the majority of ink.

Individually sealed auto-clavable archwires (10 per Pkg)

Pyramid Nitinol™ - SE
Reverse Curve & RC - 5 Arches,
24K Gold Coated & Tooth Color

Individually sealed auto-clavable archwires
 (10 per Pkg)
 **Please request when ordering.

Reverse Curve

Special Clinical Benefits:

- Prevents unwanted tooth movement while preserving the arch form.
- Mesio-lingual molar rotation is prevented with special posterior curved arch wire ends.
- Teeth located next to extraction areas will not tip or lose incisor torque.
- Helps to open the patient's bite and prevents "Excess Curve of Spee."

RC is the original Reverse Curve with moderate curve, torque and distal toe-in.

RC-5 is the straight leg version on Reverse Curve. It is identical to the Full Form shape archwires with moderate curve and no distal toe-in or posterior torque.

**Pyramid Nitinol™ - SE
7" Straight Lengths, Coil Springs, &
Extension Springs**

Pyramid Nitinol SE Coil Springs

7" lengths

Open Coil Springs open and maintain space gently and efficiently in a convenient cut length design. One 7" lengths per package or a convenient 21" spool.

Closed Coil Springs deliver ideal forces for Class II intra-arch maxillary retraction as well as other space closure and maintenance applications. Eyelet design allows versatile placement alternatives with two lengths and four force ranges to accommodate any application. .030" coil diameter. 10 per box, 7" lengths with 1 per package, or 15" spool.

**Stainless Steel
Coated - Tooth Colored
Arches**

Creating Beautiful Smiles does not require non-aesthetic treatment. Tooth-colored and gold-plated archwires complement visual values important to many orthodontic patients. The aesthetic coatings of our NiTi and Stainless Steel archwires do not degrade the inherent performance characteristics of the underlying base wire.

All tooth-colored archwires necessitate the use of base wires that are .002" smaller than the final coated dimensions, so please consider this when selecting wires to ensure performance will be compatible with treatment objectives. Gold coated wires require minimal plating and are not dimensionally affected.

Tooth-colored archwires are ink midlined for symmetrical identification. After archwire placement, rub midline gently with a cotton swab dipped in isopropyl alcohol-this will remove the majority of ink.

Arches**

Round stranded wires are traditionally used in early treatment to correct misaligned teeth due to the gentle nature of the wire. Stranded wires apply a low force level over a given span with minor to moderate deformation depending on the severity of the malocclusion.

Rectangular stranded wires are typically used in transitional applications to align and detail occlusions effectively with comparatively lower force than solid stainless steel archwires.
